The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 4-8, 13, 14, 22, 27, 28, 31-34, and 36-54 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to use the invention.

The instant specification invites the skilled artisan to experiment. The factors which must be considered in determining undue experimentation are set forth in Ex parte Forman 230 USPQ 546. The factors include:

- 1) Quantity of experimentation necessary,
- 2) The amount of guidance presented,
- 3) The presence or absence of working examples,
- 4) The nature of the invention,
- 5) The state of the prior art,
- 6) The predictability of the art,
- 7) Breadth of the claims and
- 8) the level of skill in the art.

A disclosure in an application, to be complete, must contain such description and details as to enable any person skilled in the art or science to which it pertains

use the invention as of its filing date, In re Glass, 181 USPQ 31; 492 F.2d 1228 (CCPA 1974).

While the prior art setting may be mentioned in general terms, the essential novelty, the essence of the invention, must be described in such details, including proportions and techniques where necessary, as to enable those persons skilled in the art to make and utilize the invention. Presently, the instant method is not seen as supported by the written description and the instant disclosure would not enable a person skilled in the art to prepare products by the recited process. Examples and description are not of sufficient scope to provide enablement for the scope of the claims. The working examples provide use only for compounds where R^5 and R^6 form a heterocyclic ring piperidine. More than routine experimentation would be required to place such a vast spectrum of compounds in possession of the public, i.e. determining which compounds of the formula II-1 are suitable agents from the vast number of compounds made possible by the recited formula. Further, the quantity of experimentation needed to use the invention based on the content of the disclosure is large and unexpected in light of the very limited example of use disclosed which does not include a non-cyclic moiety where R^5 and R^6 do not form a ring.

No claim is allowed.
